

Biological sciences

Biological sciences encompasses all the divisions of natural sciences examining various aspects of vital processes. The concept includes anatomy, physiology, cell biology, biochemistry and biophysics, and covers all organisms from microorganisms, animals to plants.

Methylglyoxal couples metabolic and translational control of Notch signalling in mammalian neural stem cells

Gene regulation and metabolism co-ordinate self-renewal and differentiation of neural precursors (NPCs) in the developing brain. Here the authors show that methylglyoxal, a glycolytic intermediate metabolite,... [show more](#)

Active transcytosis and new opportunities for cancer nanomedicine

New evidence suggests that the mechanism of nanoparticle entry into solid tumours may be driven by an active process. This insight paves the way for approaches to enhance the efficiency of nanomedicine delivery by... [show more](#)

News and Views | 24 April 2020

A nanoparticle's pathway into tumours

New evidence now suggests that the dominant mechanism of extravasation of nanoparticles into solid tumours may be through an active process of endothelial transcytosis.

Irene de Lázaro & David J. Mooney

Nature Materials 19, 486-487

Comments and Opinion | 24 April 2020

A meeting framework for inclusive and sustainable science

The ABCD conference format (All continents, Balanced gender, low Carbon transport, Diverse backgrounds) mixes live-streamed and pre-recorded talks with in-person ones to reflect a diverse range of viewpoints and... [show more](#)
